## Gnuplot Style Reference - gnuplot\_style.py (with integrated gnuplot.mplstyle)

import gnuplot style as gp Available Styles: import matplotlib.pyplot as plt 'c' - Colors only 'l' - Lines only (black) 'm' - Markers only # Apply a style (automatically loads gnuplot.mplstyle)
gp.use('cl') # Colors + Lines 'cl' - Colors + Lines gp.use('cm') # Colors + Markers 'cm' - Colors + Markers gp.use('all') # All features 'all' - All combined # Disable mplstyle if needed Convenience functions: gp.use('c', apply\_mplstyle=False) gp.colors() gp.lines() # Then plot normally plt.plot(x, y) gp.markers() gp.colors\_lines() # For bar patterns:
bars = plt.bar(x, heights) gp.colors\_markers() gp.all() gp.apply\_pattern(bars, pattern\_index)

Integrated gnuplot.mplstyle:
Serif fonts (Computer Modern)
Figure: 6.4x4.8, 300 DPI
Ticks: gnuplot style
Legend: white bg, black border
No grid by default
Error bars: no caps
And much more...
